

ABSTRACT

This project was a product of research investigation at the Office of Liga ng mga Barangay, in the Municipality of Pres. Roxas, Capiz. It generally aimed to create Accounting Database System that could store data and to print out the monthly financial transaction in the Municipality of Pres. Roxas, Capiz.

Further, the said system has their unique features that could automatically calculate the Trial-balance and the cashbook to print out the monthly report of all financial transactions and also to fill up all the necessary data. The proponents embraced the systems development life cycle (SDLC) in developing their system proponents which started with the preliminary investigation through interview and office observation.

Through this information system, the organization can easily encode the data without using the traditional way of encoding.
