ABSTRACT

The software was developed from November 2016 until February 2017 at Capiz State University, Pilar, Capiz. Specifically, this project has the main objectives: (1) to help the resort operate efficiently by eliminating all the time consuming procedures and provide a better service to the customer, and (2) to create records on database used in making purchases.

Palm Garden Management System was developed to manual process of Palm Garden Resort. Each member of the project team performed a specific task. The group organization includes the programmers and database designer. The developed system would make the resort transactions fast, efficient and convenient for the manager.
