

## **ABSTRACT**

This study was set to determine the Disaster Preparedness of CapSU Pilar Students, More specifically, it is sought to (1) Determine the Socio-Demographic Profile of the respondents, (2) To identify the disasters preparedness of CapSU Pilar students,

The respondents were the 30 selected students of CapSU Pilar. They were selected using simple random technique.

Findings revealed that all of the respondents were aging 21 to 25 years and single. Many of them were females. Findings also revealed that most of the respondents were well prepared on the conduct of the school on the disaster risk reduction program. Results showed that respondents were well prepared on the disaster preparedness.
